

Man-9 Glycan

Cat. # : CN-MAN9-x (where x denotes pack size)

Structure

Oxford Notation

CFG Notation

Text Notation

Synonyms: Man-9 N-linked oligosaccharide. Oligomannose 9 glycan.

Description: Oligomannose N-linked oligosaccharide with 9 mannosyl residues.

Sources: Man-9 glycan is found in a wide range of both plant and animal glycoproteins. This product is typically purified from the oligosaccharide pool released from porcine thyroglobulin by hydrazinolysis using a combination of HPLC and glycosidase digestion.

Form: Dry. Dried by centrifugal evaporation from an aqueous solution.

Molecular Weight: 1884

Purity: > 90% pure as assessed by a combination of ¹H-NMR and HPLC.

Storage: Refrigerate (-20°C) both before and after dissolution. This product is stable for at least 5 years as supplied.

Shipping: The product can be shipped at ambient when dry. After dissolution, ship on dry ice.

Handling: Allow the unopened vial to reach ambient temperature and tap unopened on a solid surface to ensure that most of the lyophilized material is at the bottom of the vial. Gently remove the cap, add the desired volume of reconstitution medium, re-cap and mix thoroughly to bring all the oligosaccharide into solution. For maximal recovery of oligosaccharide, ensure that the cap lining is also rinsed and centrifuge the reconstituted vial briefly before use. Ensure that any glass, plasticware or solvents used are free of glycosidases and environmental carbohydrates.

Safety: This product is non-hazardous and has been purified from natural sources certified to be free of all hazardous material including pathogenic biological agents.

For research use only. Not for human or drug use
